Arizona State University site launched!

eChazen Internet Solutions was contacted by Arizona State University's Del E. Webb School of Construction to give their site a new face-lift. They were faced with many complex issues with the old site and asked us to deliver a rock-solid layout and design to remedy the situation.

Their complaints about the old site were:

- Hard to navigate
- Hard to find needed information
- Too cluttered
- Not intuitive and was hard to follow
- Front page was crammed with information
- Faculty, alumni, students and other groups were fighting for space on the front page
- Subpages did not have a standard theme

Using our years of design experience, we delivered a design with a horizontal menu that provides multi-level drop-down menus. This allows for more horizontal "real-estate" for the content area which the different groups were fighting for. We also kept the layout clean and simple so that content is easy to read. We designed sub-sections that use the same layout and theme, but supply different color schemes to give them their uniqueness.

Here are the files that we delivered to them:

- Main page
- Students page
- Faculty page
- Alumni page

The menus were not included in our deliveries since ASU chose to use their own menu script. Notice these are purely CSS designs which are completely table-less.
